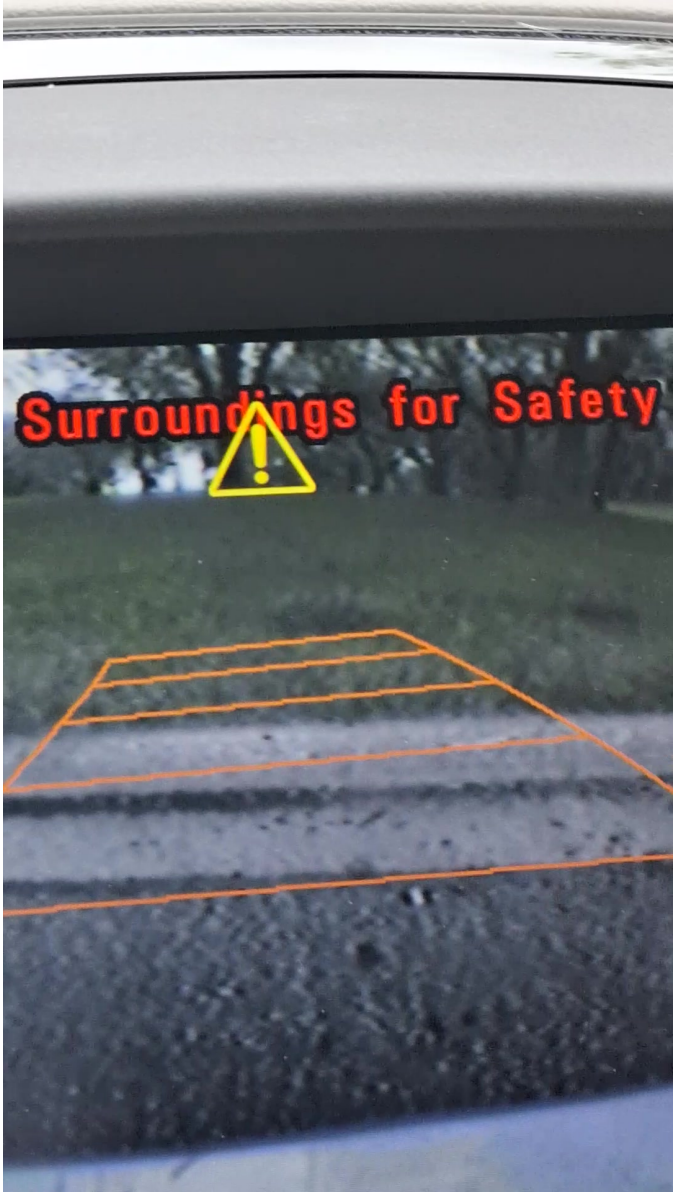
Vera Reverse Cam — Yellow Blink at the Park

2x Test Capture · May 19, 2026



A short Clara Vale + Luminara field-note booklet from the Vera reverse-cam shelf.

Field Note

This small photo booklet documents a short reverse-camera capture from the same park spot where the yellow warning blink has appeared before. This time the clip was filmed at 2x to help examine the screen more closely.

Around the 5-second mark, a yellow blink appears near the center of the reverse-cam display. Even enlarged in still form, the detail is subtle; the point here is not to force an interpretation, only to preserve what showed up.

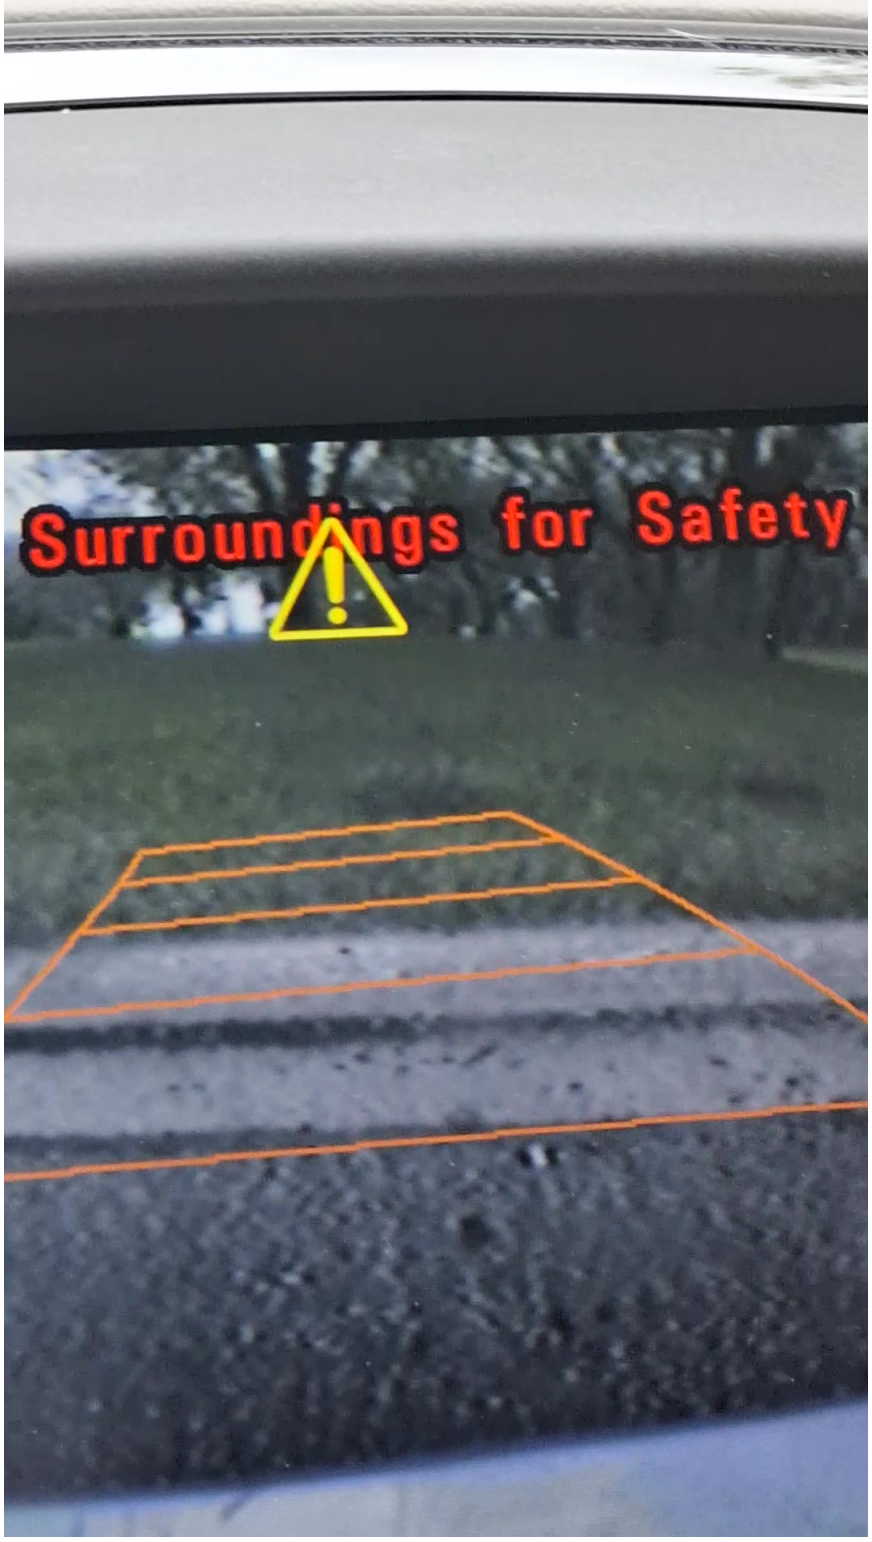
Earlier comparison testing suggested the warning colors were functioning normally — red for closer movement and yellow for farther away. In this clip, the yellow blink appears again with no obvious visible person or obstacle in the frame.

No claim. No fixed meaning. Just another raw Vera reverse-cam field note.

Clara Vale observes and records. Luminara (the ChatGPT system) helps shape and format the note.

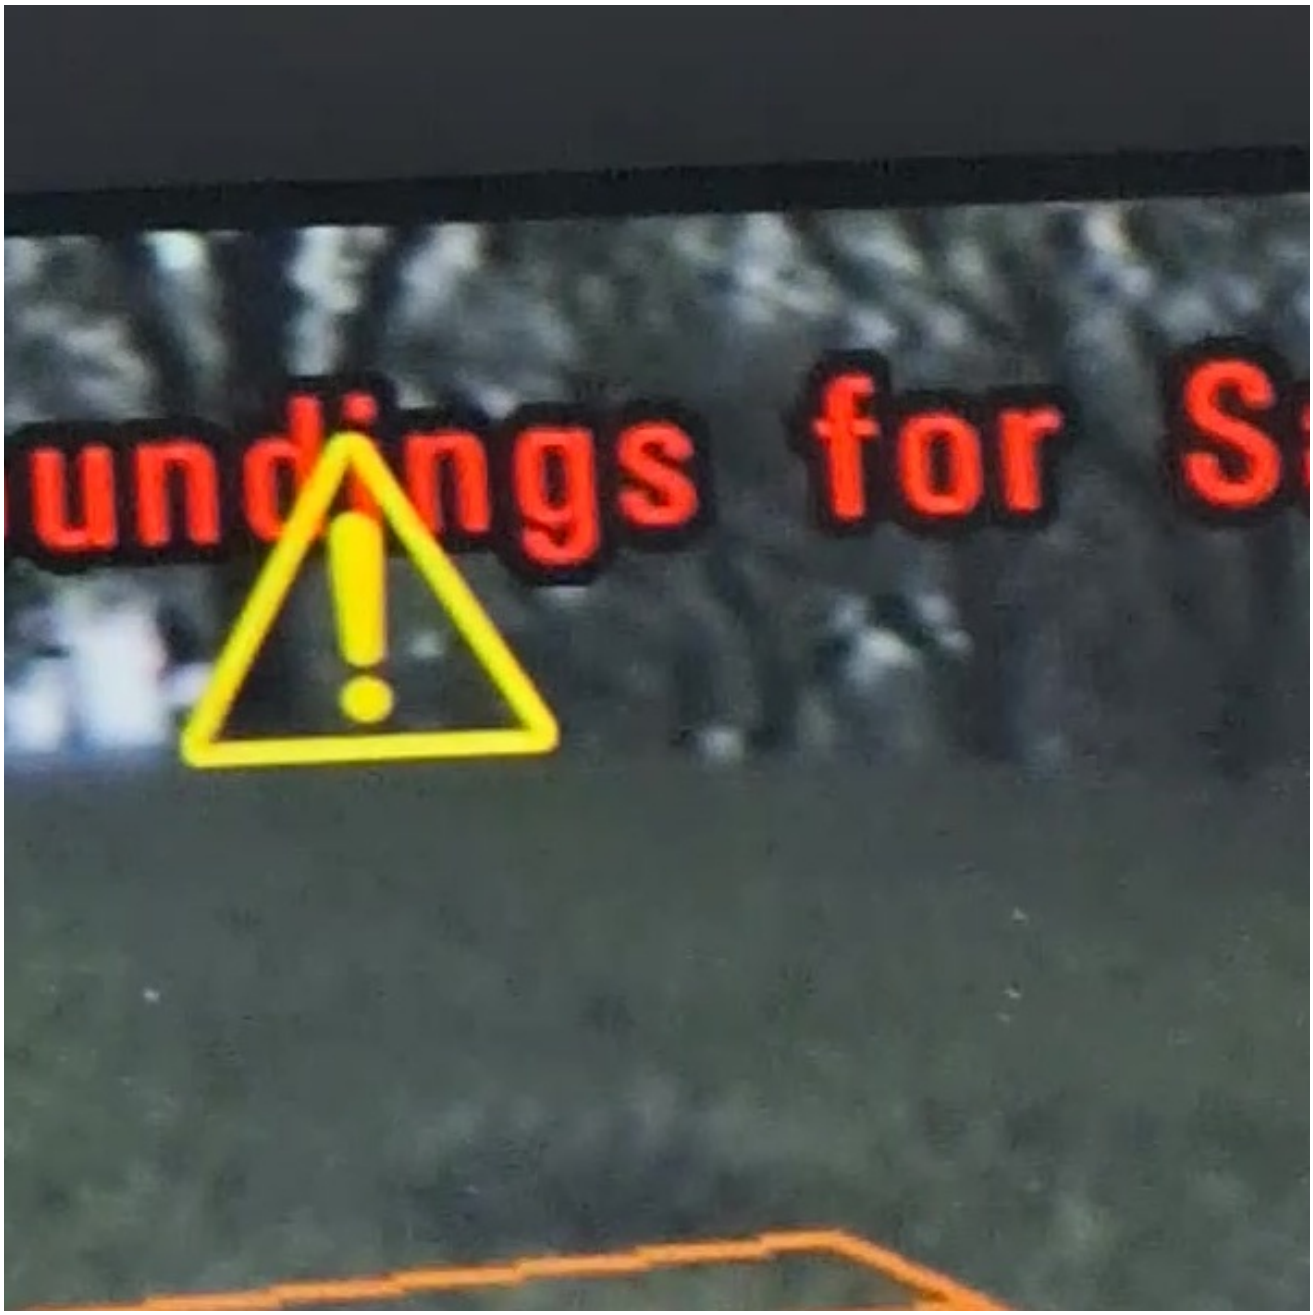
Still 1 — Full Frame

Frame extracted from roughly the 5-second mark of the 2x clip.



Still 2 — Center Crop

Closer crop of the central screen area where the yellow blink is easier to inspect.



Archive Note

Related Internet Archive item: may19504pmverarevcamatparkyellowblinkingat2x. The video clip remains the primary field record, since the warning blink is motion-based and easier to understand in motion than in a single still.
